## **Project Design Phase-II**

### **Solution Requirements (Functional & Non-functional)**

Date	19 November 2022
Team ID	PNT2022TMID03608
Project Name	Project – Natural Disasters Intensity Analysis and Classification using Artificial Intelligence
Maximum Marks	4 Marks

## **Functional Requirements:**

Following are the functional requirements of the proposed solution.

		Sub Requirement (Story / Sub-Task)
FR	Functional Requirement	
No.	(Epic)	
FR-1	Request Permission	Access permission from web camera.
FR-2	Disaster Prediction	Based on the webcam image, natural disaster is
		classified.
FR-3	Accuracy	
		Since the training and testing images are huge, the accuracy is higher.
FR-4	Speed	
		The generation of results from the input images are faster.
FR-5	Resolution	
		The resolution of the integrated web camera should be high enough tocapture the video frames.
FR-6	User Interface	
		Maximizing the interaction in Web Designing Service.

# **Non-functional Requirements:**

Following are the non-functional requirements of the proposed solution.

FR	Non-Functional	Description
No.	Requirement	
NFR-1	Usability	User friendly and classify the disaster easily.
NFR-2	Security	The model is secure due to the cloud
		deployment models and also there is no login issue.
NFR-3	Reliability	
		Accurate prediction of the natural disaster and the website can also be fault tolerant.
NFR-4	Performance	
		It is shown that the model gives almost 90 percent accuracy after continuous training.
NFR-5	Availability	The website will be made available for 24 hours.
NFR-6	Scalability	The website can run on web browsers like Google chrome, Microsoft edge and also it can be extended to the NDRF and customers.
